

**Family
Note**

As you compare numbers of seeds in apples and numbers of sections in oranges, encourage your child to use mathematical terms like *more*, *less*, *about the same*, and *equal*.

Do all apples have the same number of seeds?
About how many do you think they have? Take a
guess.

Keep track as your family eats some apples over
a few days and find out.

How about sections of an orange? Do all
oranges have the same number of sections?
