

Family Note

For this activity, make sure that the containers are nonbreakable. Bath time provides an excellent opportunity to experiment and play with these containers.

The process of filling containers and comparing how much each can hold gives children the opportunity to experiment with the measurement of volume without worrying about exact answers.

Collect some containers that are different shapes and sizes, such as cottage cheese cartons, plastic bottles, and juice containers.

Use the containers to pour water back and forth. Try to find out which container holds the most, which holds the least, and which containers hold about the same amount.
