

## Family Note

Most likely you have many thermometers in your home. Look around together with your child and make a list of the thermometers you have. For example you might find an oven thermometer, a refrigerator thermometer, a people thermometer, a meat thermometer, or a candy thermometer. Keep a lookout in your neighborhood for other thermometers.

Listen to the weather report on television or radio. Compare the temperature given to the reading on your own home thermometer. Are they the same or different?

Check the thermometer at the same time of day for a few days in a row.

Has the temperature stayed the same? Is it higher or lower? You might want to record the temperature on your calendar.

Before reading the thermometer, predict whether today is warmer or colder than yesterday. Then check to see if you were right.
